Two points.

**1.**

We have added a new publication to our EnergyCite LTD and our Fusion4Freedom websites. It is titled:

“Where we stand on the issues of energy, climate change and current generation “renewables””

On EnergyCite LTD at: <http://energycite.com/stand.php>

On Fusion4Freedom at: <http://fusion4freedom.us/stand-issues-energy-climate-change-current-generation-renewables/>

The text and graphics are the same. On EnergyCite LTD it may be found on the **About** drop down tab on the home page.

On Fusion4Freedom it is found on the right-hand vertical sidebar.

The article should be self-explanatory. It states what we believe and why without taking any “political” sides or diminishing the worth of any business.

This is a “selling feature” for our prospective corporate investors, some of whom have made investments in “alternative energy start-ups.” As I have stated many, many times to all our investors, contractors and past employees, from 2001 onward, USCL never supported nor even mentioned AGW or climate change caused by man. Whereas Jeffrey Michel wrote a couple of papers on CO<sub>2</sub> mitigation through the use of smart meters which we had posted to our USCL website in English and Hebrew in the 2006 time frame (since removed,) the fact of the matter is in America fossil fuel is the first choice for baseload power by all utility senior executives along with Hydro. That is followed by nuclear. No utility seriously considers solar, wind, and the like for baseload power but at the mid-management level, utilities play the “political game” to keep green energy subsidies from the rate base and the government flowing.

The reason USCL has never gotten on the “climate change” bandwagon is that main stream media, public and politician’s opinion notwithstanding, AGW has not been proven and as a matter of science never will be. As energy costs soar and supplies tighten, the political tide favoring “green energy” will turn and fossil fuels along with new modern safe nuclear will be once again favored. But in all cases no one is against conservation. That is where we stand. We maintain a balanced position. We present the detailed science to people that are interested while at the same time reaching out to those in the alternative energy fields and offering the use of our energy conservation platform.

On the main <http://tamarkin.us> home page under the energy source graphic and above the social medial links there is a new selection button titled “Principia Scientific.” It links up to five recent articles of mine on energy, climate change, and the like as published by them.

2.

We have greatly expanded our USCL due diligence section in anticipation of formal due diligence regiments starting based on our current activities and feedback. I encourage everyone to review this site as it represents virtually 100% full disclosure on USCL’s activities going back to 2001.

Over the course of the next few days we will add a new section with the USCL corporate federal tax returns for FY ending 2010 and the preceding 2 years supporting our \$2.7+ million USD loss carry forward which is a significant asset of the company and will be preserved. Of course this is reflected on our financial statements which are currently posted from 2002-2010

Kind regards,

Tom

Sincerely,

**USCL Corporation (in-active status),**
