Ref: Effect of the 2016 Election on USCL/EnergyCite
Date: November 11, 2016

Several people have emailed me asking what impact President elect Trump's administration will have on USCL/EnergyCite. On balance it is very positive for us and for several reasons.

From 2001 onward, USCL/EnergyCite has never gotten on the anthropogenic global warming or climate change bandwagon and its derivative green energy subsidized programs. This is an attribute because those things are highly political and subject to the administration in power. The only remote connection USCL ever had to climate change issues was our posting of two papers on the use of smart meters for CO₂ mitigation by Jeffrey Michel. Those papers have been removed from the USCL website.

My recent article titled "*Man-Made Global Warming Myth & Why Big Green Investors Rely On It*" shows the physics and atmospheric impact of increased CO₂ in the atmosphere. You could quadruple CO₂ from 400 parts per million to 1,600 ppm and it would have an immeasurable impact on the Earth's mean global temperature. Such an increase in atmospheric CO₂ would have a highly beneficial impact on agricultural production. My article further shows the scientific fraud associated with "establishment climate science"...including advocates of increased "acidification of the oceans" theories...and the tremendous corruption associated with carbon dioxide mitigation, and green energy subsidies. Please read this important article and share it; on-line at: <http://fusion4freedom.us/agw-myth-investor-reliance/>

I have also said that no one disagrees with conservation, demand side management, and saving consumers' money by giving them tools to monitor and manage energy expenses.

There will be an enormous sea change in America beginning on January 20, 2017 insofar as the new administration's view on AGW or man created climate change, subsidies for "renewables," and the restructuring of the EPA, thereby bringing fossil fuels back into public favor through lower cost energy.

Utility and baseload energy supplier senior executives around the country have breathed a silent sigh of relieve at the news Mr. Trump has been elected President of the United States (and leader of the free world.)

My friend, Lord Christopher Monckton 3rd Viscount of Brenchley, reached out to President elect Trump on the morning after the election and wrote this 10 point memo: <http://fusion4freedom.us/message-donald-j-trump-administration-american-people/>

An article appearing in Scientific American (opinion) in September announces President elect Trump's pick for transition management of energy and EPA issues: <http://fusion4freedom.us/trump-picks-top-climate-skeptic-lead-epa-transition/>

Our EnergyCite LTD business partner, Pat Boone, has personally spoken with Mr. Trump on two occasions over the last six months and has reaffirmed Mr. Trump's intent to lift the burdensome energy regulations based on fraudulent global warming science and to pull America out of the "Paris climate agreement" before too much economic and geo-political damage occurs.

So regardless of people's personal views and feelings on "global warming" and "renewable energy" subsidies, this is the new reality in America supported by a Trump administration with a Republican Congress. Climate change initiatives insofar as CO₂ mitigation and government boondoggle subsidies for solar, wind, etc., renewables are dead unless they are positive cash flow efficient (which leaves us with new modern safe nuclear programs...) See this important article (external site:) <https://wattsupwiththat.com/2016/11/10/insideclimate-news-in-trump-u-s-puts-a-climate-denier-in-its-highest-office-and-all-climate-change-action-in-limbo/>

It must be stressed that our business is immune and, in fact, will be supported by the incoming administration...no subsidies required. Pat Boone's 9th article on USCL EnergyCite, "Saving Energy...and our Privacy" talks about consumer privacy issues and the smart meters. Our approach to the integration of the EMS-2020 Home Area Network and consumer electronics to the smart meters is consistent with individual rights and eliminates the big brother is watching & controlling syndrome supported by the current administration. Article at: <http://fusion4freedom.us/saving-energyand-our-privacy/>

Also, it should be noted that I have personally sent three letters to Mr. Trump; 2012, 2015, & 2016. These letters along with their reference packages are on-line at: <http://fusion4freedom.us/letters-donald-trump/>

On balance, I would certainly say Mr. Trump's election and his announced policies to repeal unnecessary, regressive, and unsustainable regulations is a very positive sign for us. The new administration has signaled it will be very pro energy, utility, and people's rights.

Kind regards,

Tom Tamarkin
